Deliverable D7.2 - Dissemination plan

ABSTRACT

The present deliverable describes the Dissemination Plan of the NEWSOL project. This Plan distinguishes between the dissemination for peer groups and dissemination for other target groups, which is mainly a communication plan [1, 2].

An important pillar of the Dissemination Plan is the Advisory Board. The Advisory Board is foreseen in the DoA [3] and described in section 3 of this deliverable.

The Dissemination Plan, detailed in section 4, mainly consists in the participation in international conferences, where the project partners present their communications to other experts in the field, as well as the submission for publication of papers with the work developed in the project, of which three are foreseen for golden open access publication [3]. Green open access will be used as deemed suitable and possible. In the publication of results, partners shall conform to clause 9.4 of the Consortium Agreement [4].

The communication plan is described in section 5 and is designed to reach different target audiences (Public decision-makers; Companies working with CSP and materials for CSP or interested in joining this field; Technicians working in the CSP sector; Science, technology and engineering students; General public). This communication plan applies several tools such as poster and leaflet, workshops, website, news in media and social networks.

The present deliverable has as annexes, templates for reporting dissemination and communication activities performed by the different project partners.
